

ERD & Class Diagram

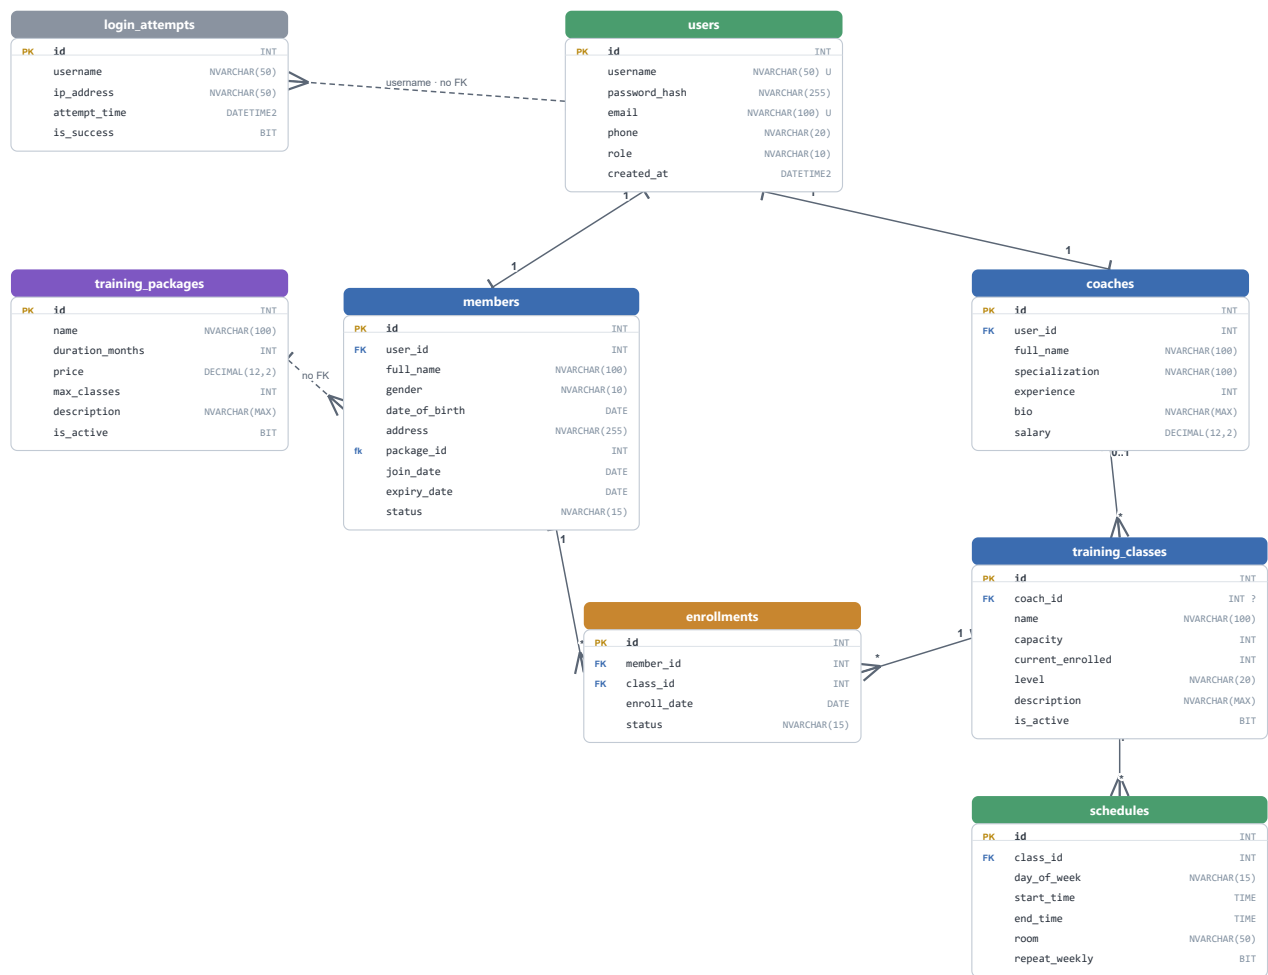

Redrawn from the authoritative schema in **database.sql** and the EF Core entities in **Models/Entities/** + **Data/AppDbContext.cs**. Eight tables, six enforced foreign keys, and two soft references (drawn dashed) that the schema does *not* constrain.

Entity Relationship Diagram 8 TABLES · PHYSICAL SCHEMA

enrollments is the junction resolving the many-to-many between members and classes (UNIQUE(member_id, class_id)). **members.package_id** and **login_attempts.username** reference other tables by value only — no FK constraint — so they are shown dashed. Crow's-foot marks the "many" (child / FK) side; a bar marks the "one" side.

TABLES ■ auth / scheduling ■ core profiles ■ enrollment ■ packages

■ security log **PK** primary key **FK** foreign key **U** unique

Class Diagram DOMAIN ENTITIES · C#

EF Core entity classes with their C# property types and navigation properties (solid open arrows, with multiplicity). Dashed arrows are value-only dependencies (no navigation):

Member.PackageId and User.Role (constrained to UserRole constants). Classes tagged «**prototype**» implement ISportClubPrototype<T>.Clone() — see the Prototype pattern diagram. Enrollment and LoginAttempt are not cloneable.
